B&C Speakers

Loudspeaker drivers and systems

The dynamic loudspeaker (1925 - ...)

A multiphysics device

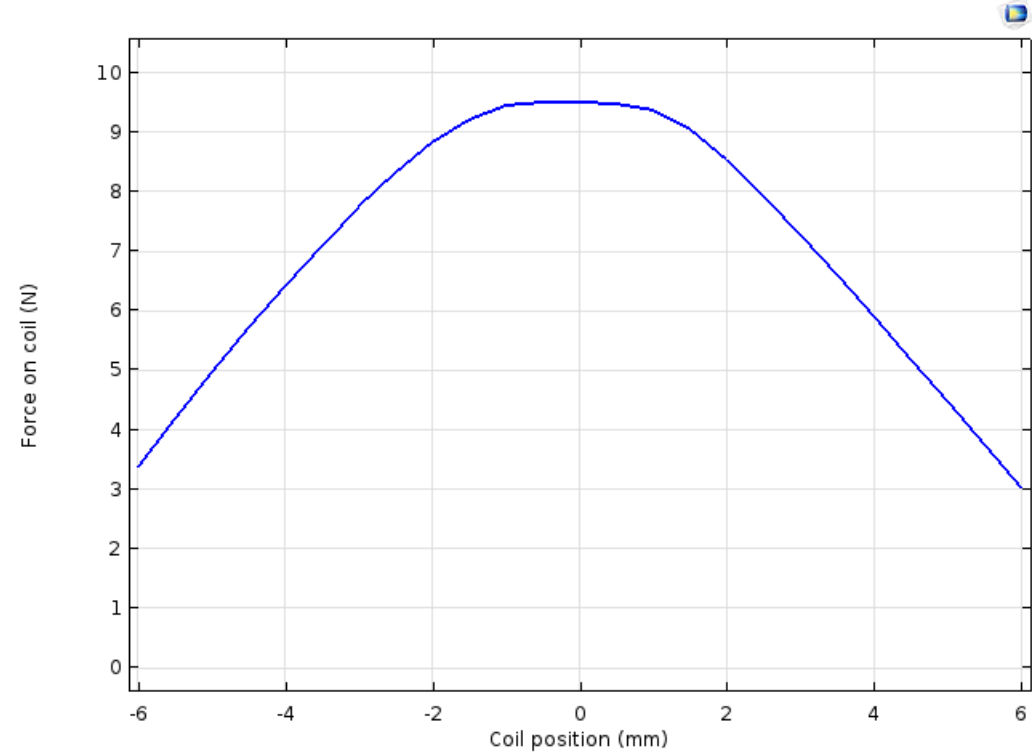

- **Electro – mechano – acoustic transducer**
- **Electromagnetism**
- **Mechanics**
- **Acoustics**
- **Thermodynamics**
- ...

Can FEA cope with all that?

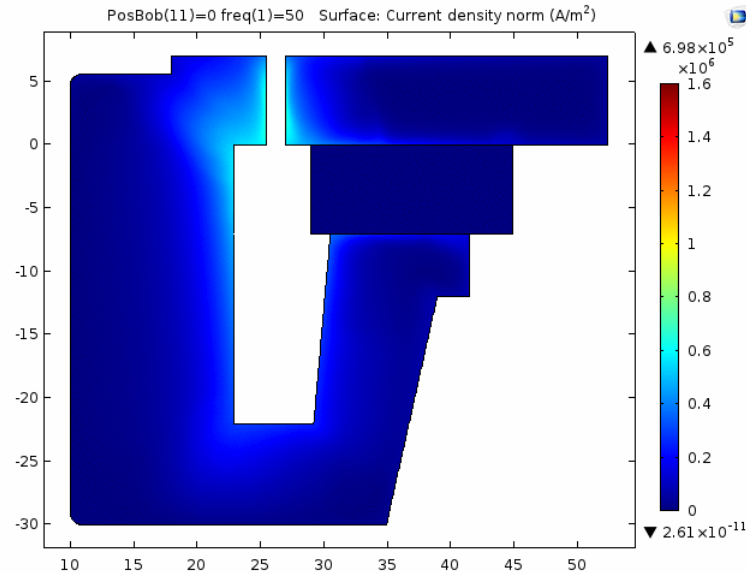

From electrical audio signal to sound

Electromagnetism: designing the magnet assembly and voice coil

Electromagnetism: eddy currents

Compression driver loudspeaker

Mechanics: compression driver moving assembly

Eigenfrequency=759.94 Surface: Displacement amplitude, Y component (mm)

Eigenfrequency=893.69 Surface: Displacement amplitude, Y component (mm)

Acoustics: phase plug design

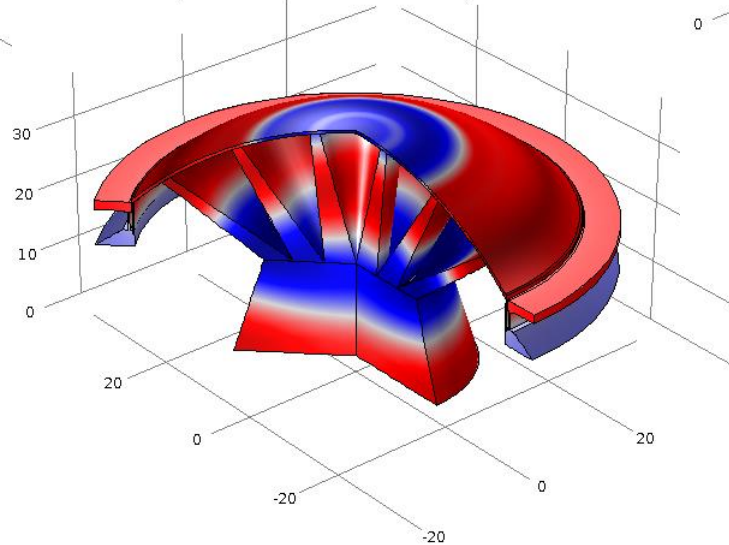

freq(41)=6047.6 Surface: Total acoustic pressure field (Pa)

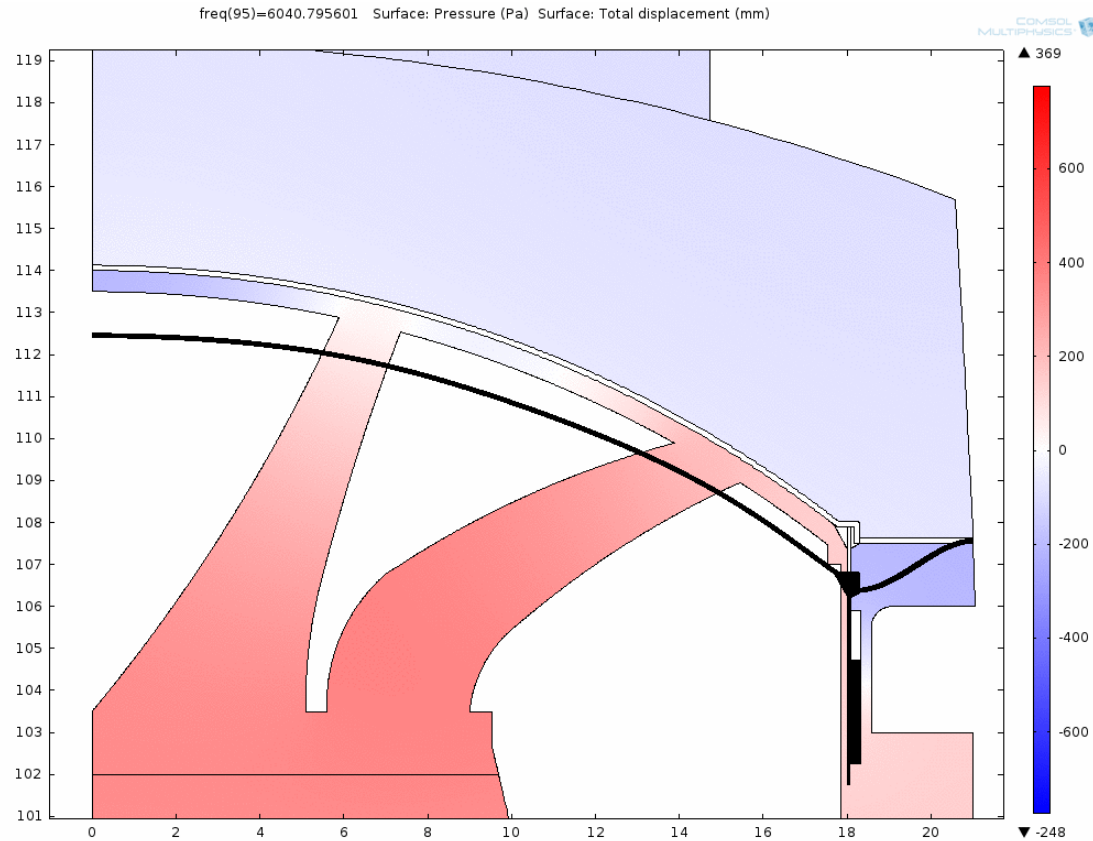

freq(58)=16145 Surface: Total acoustic pressure field (Pa)

freq(51)=10776 Surface: Total acoustic pressure field (Pa)

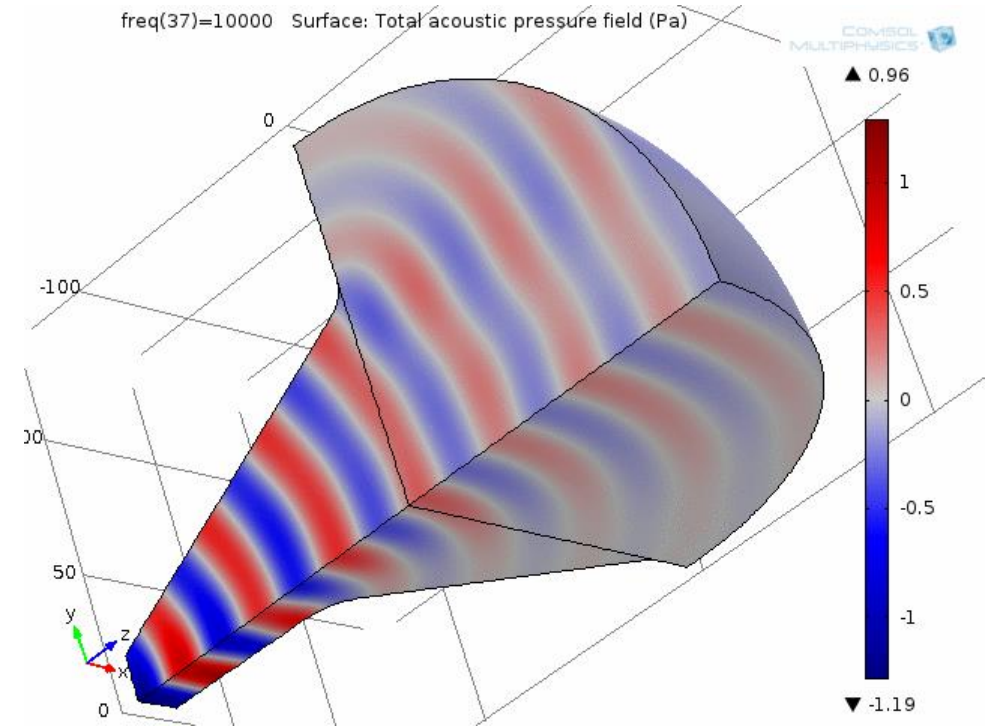

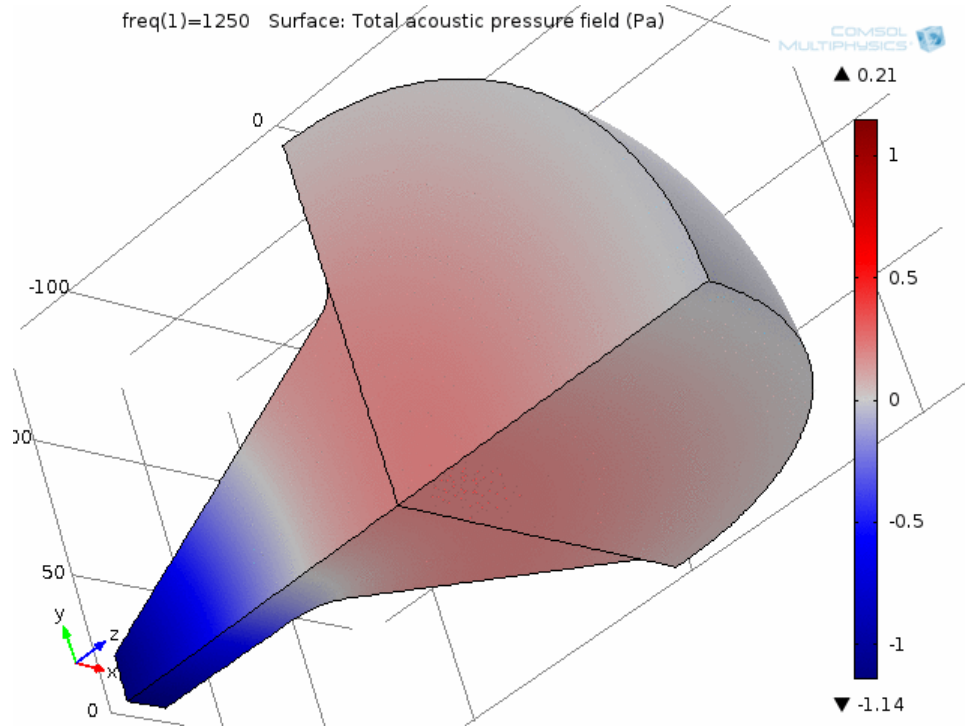

Mechanics + Acoustics: compression driver interior

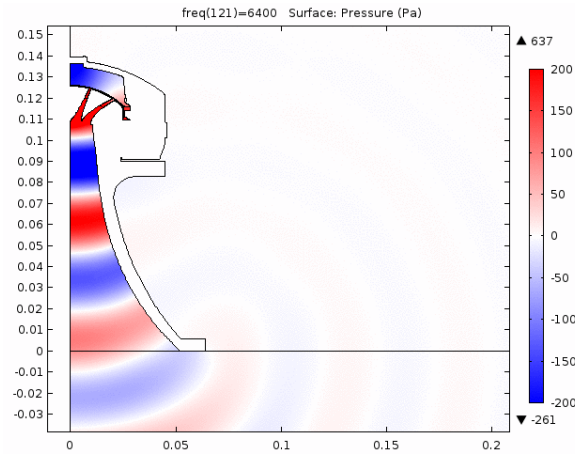

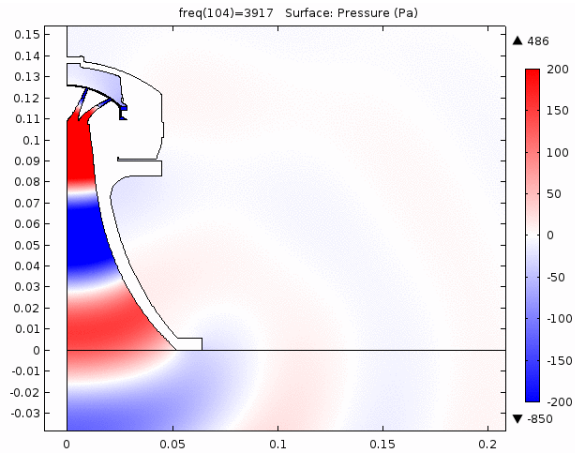

Acoustics: loudspeaker horn

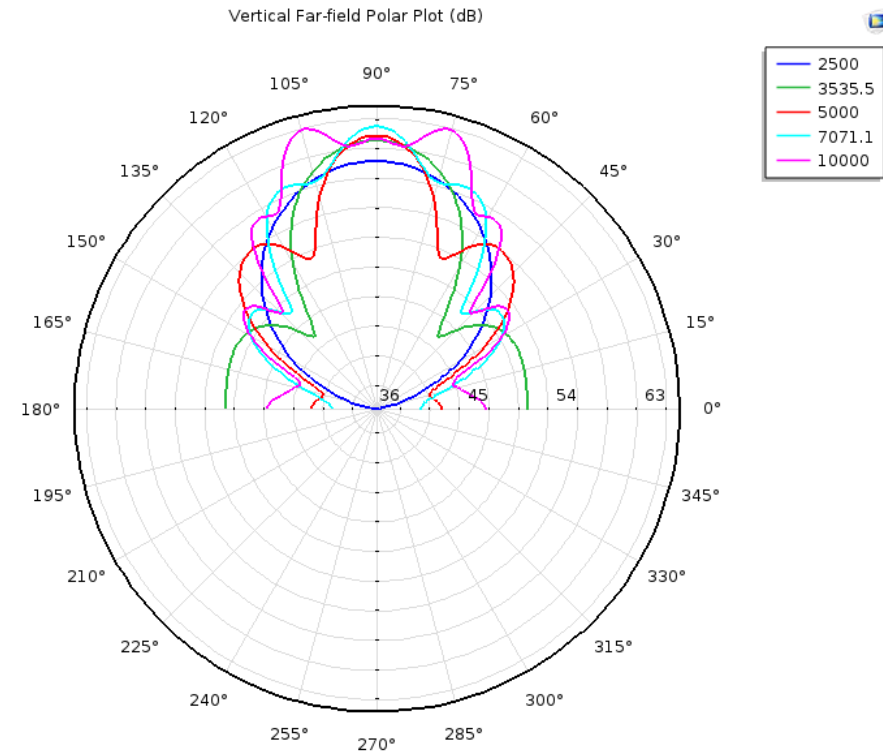

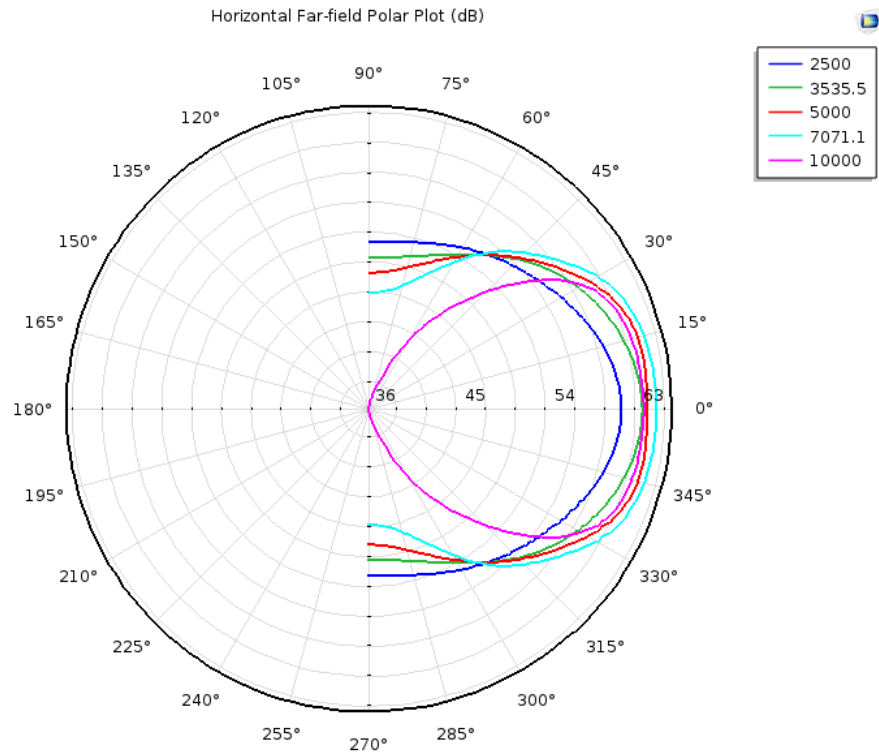

Acoustics: loudspeaker horn

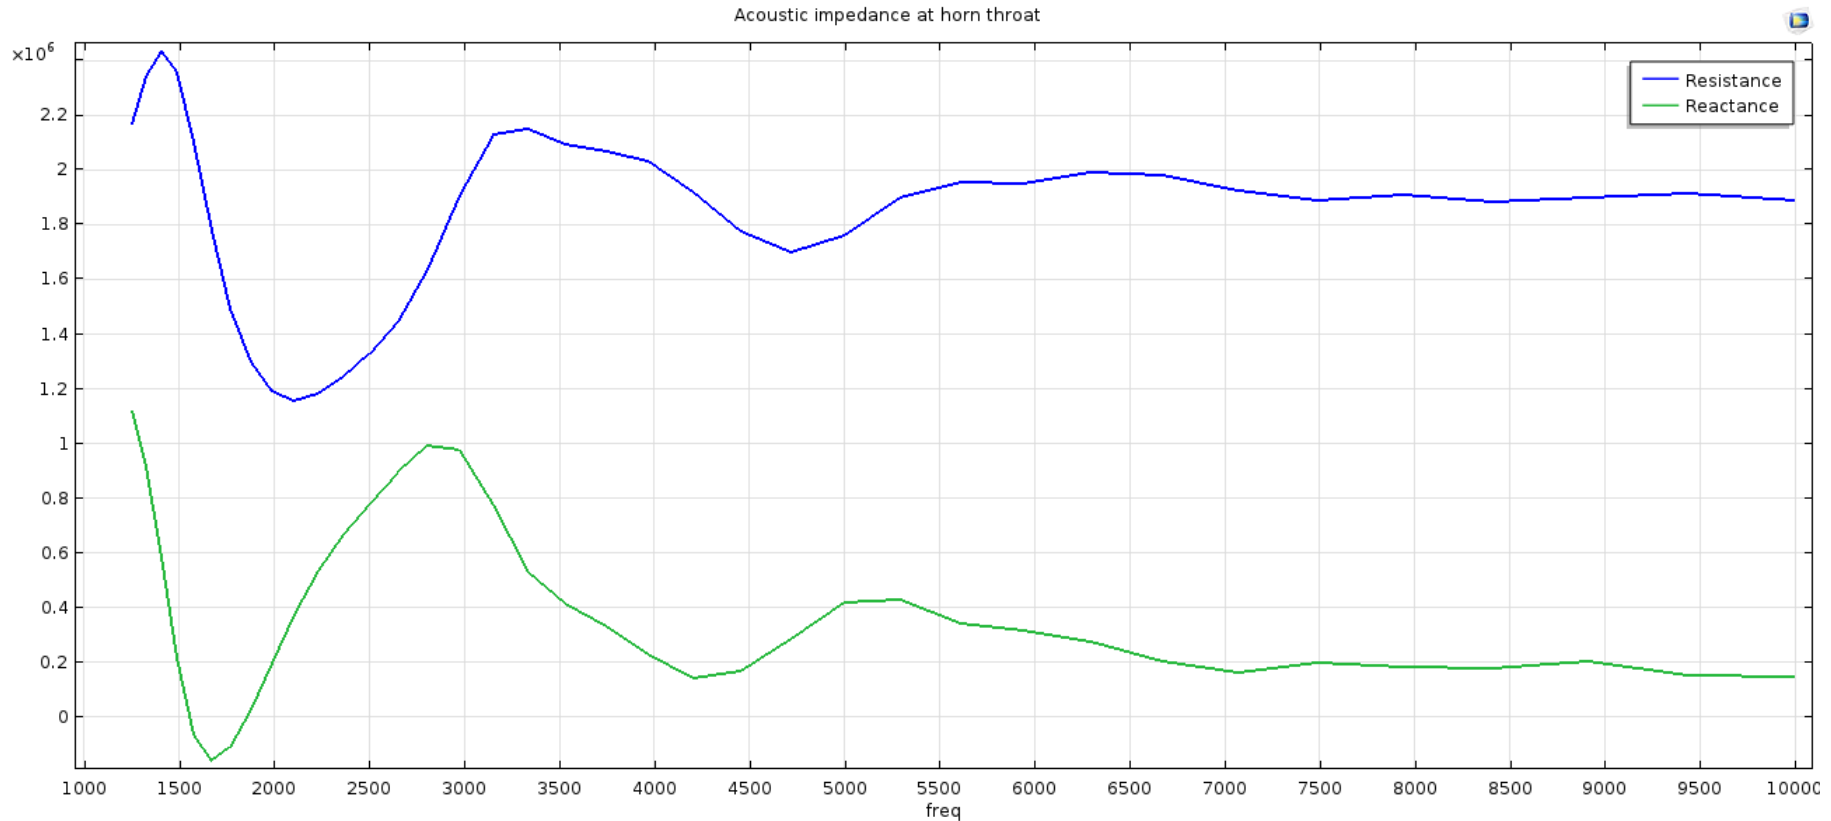

Mechanics + Acoustics: compression driver on horn

Acoustics: radiation pattern of a horn

Acoustics: acoustic load of a horn

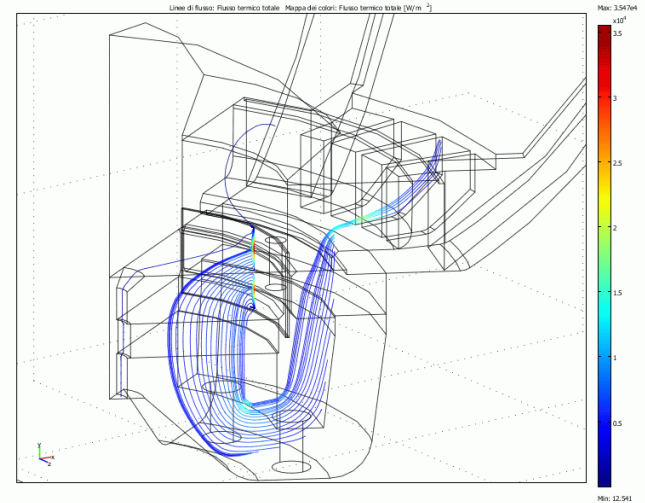

Acoustics: wavefront shape in a line-array waveguide

<https://www.comsol.it/paper/optimization-of-an-acoustic-waveguide-for-professional-audio-applications-6771>

Thermodynamics: heat paths through a loudspeaker

Lumped parameters models: Equivalent circuits

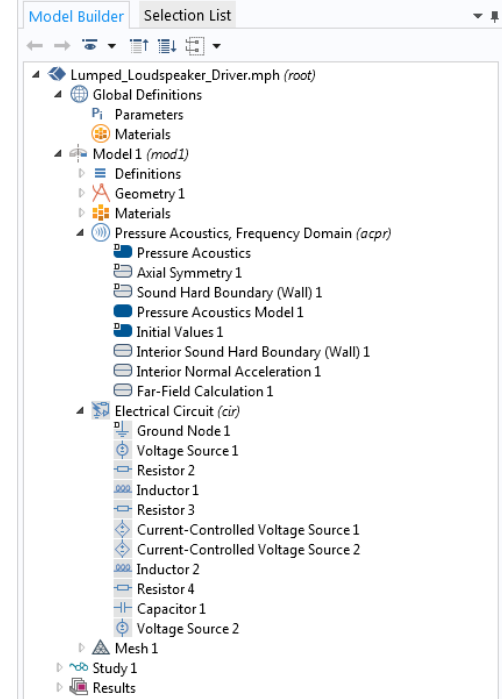

Figure 4: Acoustic pressure for a frequency of 1000 Hz (top) and 5000 Hz (bottom).

<http://www.comsol.it/model/12295>

Results: electrical impedance

Results: frequency response

Conclusions

- **Why COMSOL?**

- A multiphysics device requires a multiphysics approach
- Perfectly Matched Layers + Far-Field \geq BEM
- Equivalent circuits (lumped parameters modeling)
- Increasing capabilities in Acoustics: Thermoviscous losses, Ray tracing
- Optimization
- Support

Thank you!
